

Bar Modelling

Have a go at the questions on your table....

What did you find out?

- Bar modelling is NOT a strategy but simply a tool to aid children to see the answer
- Bar model will not always be appropriate but when it does work it relates back to one of our principals- Representation
- Bar modelling also supports the ethos that maths is not about the answer but explaining how we got there (parent workshops)

- SATS

Today we will look at:

- Introducing Bar Modelling younger children.
- Using modelling to understand curriculum content.
- Using bar modelling to solve challenging problems.

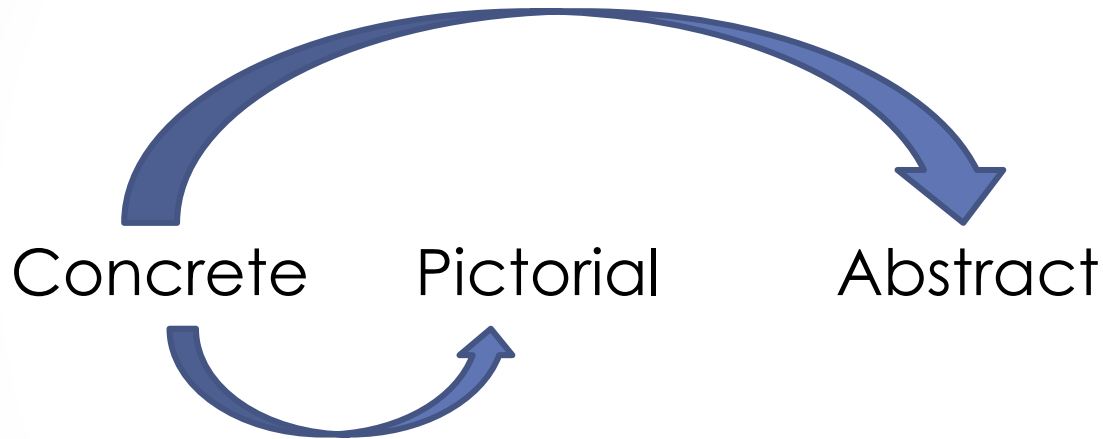

Pictorial understanding

- Why do it?
- The ability to solve a word problem requires more than procedural skills such as performing computations and conceptual understanding.
- Representations often include a diagram
- This allows students to:
 - Reflect
 - Modify
 - Link

Old Curriculum...

Year 3

Bar Model

Early years and LKS1

- To help our children understand how to represent difficult problems as they work their way up the school, bar modelling needs to be explored during EYFS and year one through real objects....

Introducing Bar Models in EYFS

Remember...

Limit the distracting factors

Use real life objects with same colours to begin

Containing

Place in a basket or bowl

Lining up objects in a row

Children start by counting familiar things using blocks or cut-out pictures they can physically line up in a row. For instance counting pieces of fruit, Lego blocks, or people in the room.

Consolidating

Don't move on until they are ready!

•

Steps in Bar Modelling

- **L**abel
- **D**ata (What is known)
- **Q**uestion (Unknown)
- **E**quation
- **A**nswer

KS1 bar modelling

**Peter has 5 toy cars and Jane has 3 toy cars.
How many toy cars do they have altogether?**

KS1 Bar Modelling

Tim has 4 sweets and Ben has 2 sweets.
How many sweets do they have altogether?

Small steps

$$4 + 2 = 6$$

Steps in Bar Modelling

- **L**abel
- **D**ata (What is known)
- **Q**uestion (Unknown)
- **E**quation
- **A**nswer

Have a go...

- Bobo the bear had 6 red hats and 2 blue hats- How many did he have all together?

Did you get them all?

$$5+3=8$$

$$3+5=8$$

Equation

Pictorial maths in literacy

Then mooing and bawling
and clucking and quacking
they all set to work
in their farm.

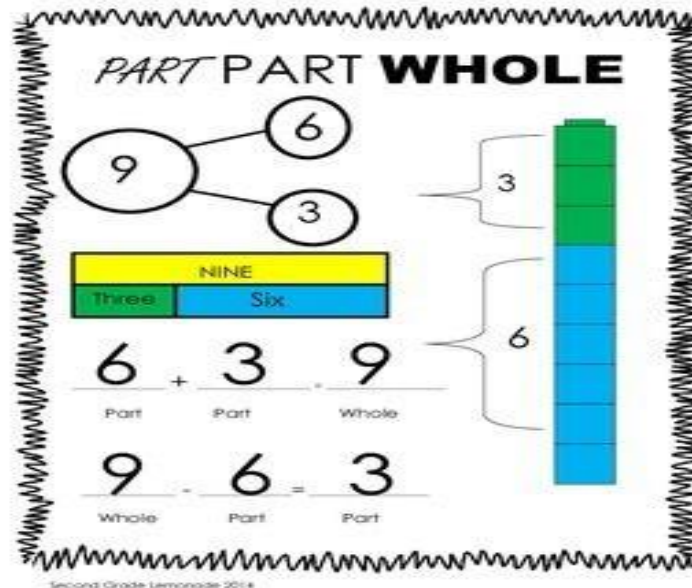

KS2

Knowledge of numbers is Key to the Bar model

Part whole

Development of this will be stronger after programme has been run for a few years but must be practiced!

Micro steps Yr3-6

- Jenny has 5 red cubes and 3 blue cubes. How many does she have all together?

Steps in Bar Modelling

- **L**abel
- **D**ata (What is known)
- **Q**uestion (Unknown)
- **E**quation
- **A**nswer

Proportion

-

?- Unknown

-

5 -Data

3- Data

$$5+3=8$$

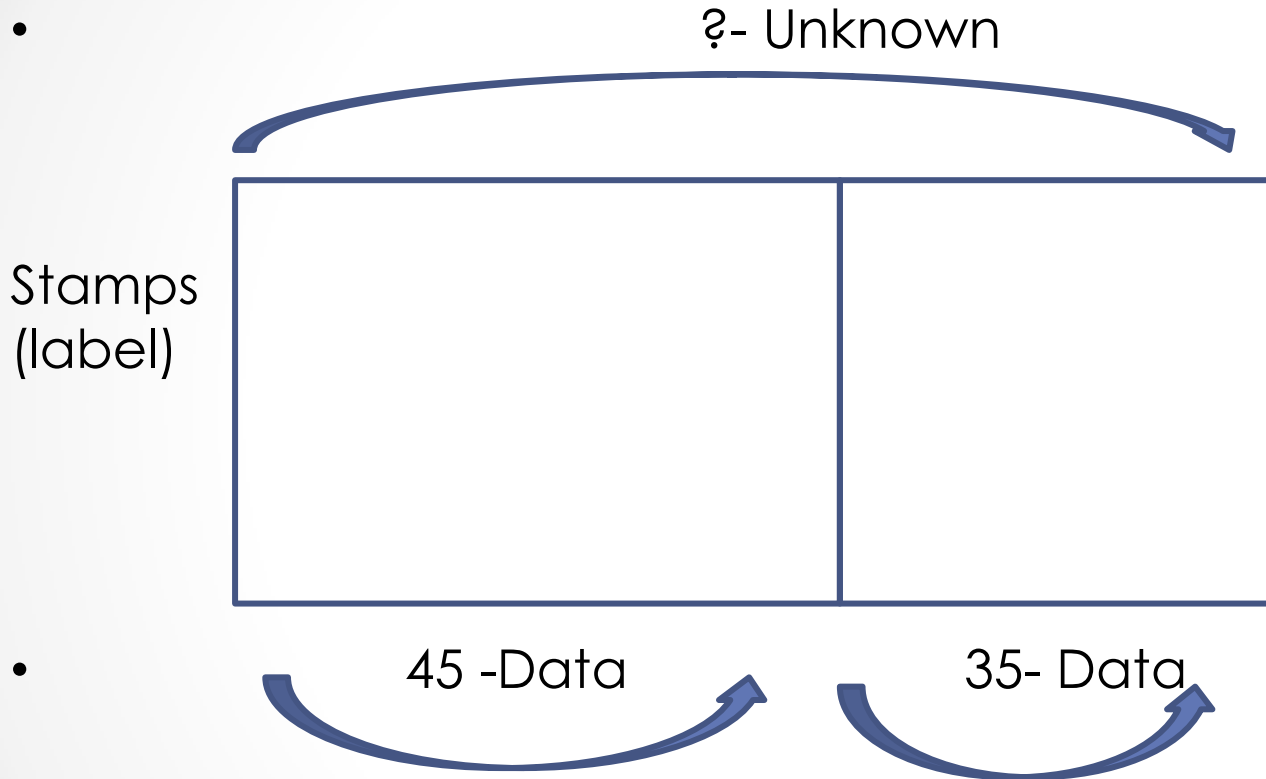

$$3+5=8$$

Equation

-

-

Sam has 45 stamps. His Father gives him 35 more. How many does he have now?

$45+35= 80$

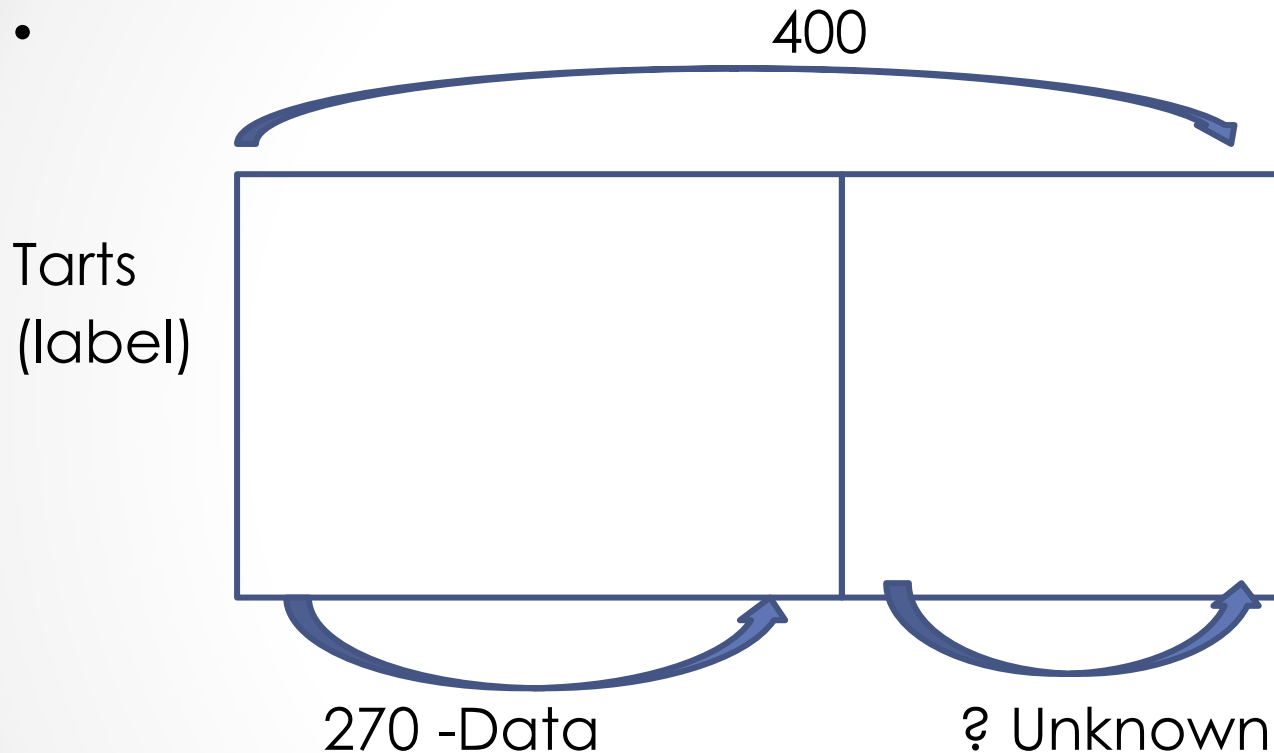

$35+45=80$

Equation

Answer: Sam has 80 stamps

Hannah baked 400 tarts. She gave 270 away.

How many does she have now?

- $400 - 270 + \underline{\quad}$
- $\underline{\quad} + 270 = 400$

Comparisons-What is the same? What is different?

Hannah made 400 tarts, Jane made 270 tarts-
what is the difference?

Hannah made 400 tarts, Jane made 270 tarts- what is the difference?

In Focus

saved £2314.

saved £4240 more than

saved.

How much did  save?

Let's Learn

1

2314

4240

?

We need to find the sum of 2314 and 4240.

In Focus

	started with 2050
	started with 2519

A B
 gave  490.
Now, who has more?
How many more?

2050

A

$$2050 - 490 = 1560$$

2519

490

B

$$2519 + 490 = 3009$$

$$3009 - 1560$$

Remember the sentence...

B has 449 more than A

Which operation?

Annie and Sam share the sum of these two amounts. Annie gets 3 times as much as Sam. How much more than Sam will Annie get?

$$3597 + 1259 = 4856$$

- £3597
- £1259

$$4856 / 4 = 1214$$

$$1214 \times 3 = 3642$$

There are four times as many children as there are adults at a science museum. The number of boys is equal to the number of girls. Altogether, there are 80 visitors at the museum. How many boys are there?

• $80/5 = 16$

• $16 \times 2 = 32$

Jordan spent $\frac{1}{5}$ of his money on sweets, $\frac{1}{2}$ of the remainder on a book. The book cost £12. How much pocket money did he have?

- $6 \times 5 = \text{£}30$

- Jordan had £30 in pocket money

-

-

Mastery- Write a word problem that can be solved using this model...
